

KSA Fashion Sales Performance Analysis

Professional Business Intelligence Report (2020–2025)

Executive Summary

This report analyzes sales, profitability, inventory, and regional performance for a fashion retailer operating across Saudi Arabia. The dashboard indicates strong overall profitability, led by Abha and Medina, while several business and data-quality challenges have been identified that may affect decision-making accuracy.

Key KPIs

- Total Orders: 2K
- Total Quantity Sold: 5K
- Total Gross Revenue: 1.10M SAR
- Total Net Revenue: 1.17M SAR
- Profit Margin: 46.91%

Business Insights

Regional Performance

Abha delivered the highest net profit contribution, followed by Medina. Riyadh showed the weakest profitability trend despite being one of the largest consumer markets. This may indicate pricing, operational, or promotional inefficiencies.

Product Category Analysis

Abayas generated the largest share of profit (24.21%), making them the most valuable category. Sportswear generated only 8.14% of profit, suggesting weak demand, pricing challenges, or excess inventory levels.

Brand Performance

Local brands outperformed international brands and generated the highest revenue. Adidas and Zara contributed the lowest revenue among the major brands displayed.

Inventory Analysis

Hoodies recorded the highest reorder level, indicating strong demand. Sportswear showed the lowest replenishment requirement, which aligns with its lower profitability.

Data Quality Issues & Risks

1. Revenue Inconsistency

Net Revenue exceeds Gross Revenue, which may indicate calculation errors, duplicated transactions, or ETL issues.

2. Missing Returns Data

The dataset does not include product returns, making profitability potentially overstated.

3. Fraud Detection Gaps

No fraud indicators are available, such as refunds, chargebacks, risk scores, or suspicious transactions.

4. Lack of Customer Analytics

Customer demographics, loyalty status, and purchasing behavior are unavailable.

5. Missing Sales Channels

The dashboard cannot distinguish between online, mobile app, and in-store sales.

Recommendations

- Audit revenue calculations and validate source data.
- Investigate Riyadh's profitability decline.
- Improve Sportswear pricing and inventory allocation.
- Add fraud monitoring and anomaly detection mechanisms.
- Introduce customer segmentation and return-rate analysis.
- Implement forecasting models for sales, profit, and inventory planning.

Conclusion

The company demonstrates strong overall performance; however, several operational and data-quality challenges must be addressed. Improving data governance, fraud monitoring, inventory optimization, and customer analytics will enhance strategic decision-making and support sustainable growth.
